Ahmetcan Aksu

SOFTWARE DEVELOPER — BACKEND, FINTECH & AI

Istanbul, Türkiye | (+90) 553 363 5308 | hello@ahmetcanaksu.com | linkedin.com/in/ahmetcanaksu | ahmetcanaksu.com

2 November 2026

To Whom It May Concern,

My name is Ahmetcan Aksu, a software developer in Istanbul with 4+ years of professional experience building backend systems end to end. My work sits where three things meet: fintech, AI, and the algorithms and systems underneath them.

At Fonmap, an SPK-licensed fund investment platform with 100,000+ Google Play downloads, I took the backend from pre-production to go-live and owned its TEFAS order infrastructure end to end in .NET: order submission, status tracking, cancellation and blockage release as fault-tolerant background jobs. I also built the custodian-bank integration (account opening, document signing, transfers), the KYC and AML checks, and chain transactions that rebalance a portfolio in a single request.

On the AI side, I integrated AI-driven portfolio recommendations and fund risk evaluations into Fonmap's investment flow, and I build LLM agents of my own: AI Sprite Studio, where a model draws and animates pixel art through 16 undoable tools, tuned for token economy on local 8B models; and AIStudio, an agent that writes animated video frames and renders them to MP4 with narration. Underneath both is a systems background: I designed Ellie, a type-safe programming language and bytecode VM in Rust for embedded targets.

- **Fintech & backend:** C# / .NET, EF Core, Hangfire, Node.js, TypeScript, MSSQL, Redis, Elasticsearch; TEFAS, banking and capital-markets integrations
- **AI & LLMs:** LLM agents & tool calling, Claude API, OpenAI-compatible APIs (Groq, LM Studio), local models (Qwen3-VL, Gemma), vision models
- **Systems:** Rust, algorithm design, compiler and bytecode VM design, embedded (ARM, ESP32)

Each of my projects has an introduction page at ahmetcanaksu.com, and I am happy to demo the AI work live. Thank you for your time; I look forward to hearing from you.
